CORIOview™ Firmware M409_06 (Dynamic Mode)

Released by: Neil Baptiste

17th February 2020

[New Features]

- Dynamic Mode.
- Labelling on Media/IP Streams
- Low Latency IP Streams

Fixed

- REST API values do not update until CLI read.
- If you apply any crop to an input and you have a label turned on, and then you then unplug or the source to that input is turned off. The label will disappear and will not return until that input sees a valid source again. So, when source loss colour is shown you will have no labels.

Notes

- Known Issues: To be addresses in the next release
 - If the unit is reset or power-cycled, the next time you log in with CORIOgrapher, you will be asked to select dynamic or classic mode
 - Saving the configuration via CORIOgrapher does not include the play-on-startup parameter.
 - Labels display incorrectly the first time after rebooting the unit into secure communications mode
 - Audio can stutter when moving between certain media clips using the Streaming Media Input module.
 - Front Panel will unlock using either button 1 or 2
 - After a restoreAll API command, labels are slow to refresh.
