 - Please refer to the user guide for full details of new feature and its functions.
- Added support for NEW LED Tools feature and functions.
 - Please refer to the user guide for full details of new features and functions.

Fixed

- None

Notes

Known Issues:

- Encoder Manager dialog uses tabs and the tab default behaviour changes the selected tab highlight when the mouse hovers over child items.
- Canvas Cut-to-black will overwrite the current output cut-to-black and canvas audio mute values. The hope is to have this behaviour supported by the firmware in a post 406 release, so the current values can be maintained.
- If you are installing CORIOgrapher and already have an older version of CORIOgrapher installed, then double clicking a CM2C config file may still open in old version. If the CM2C files do not automatically register to new version you can change this by right clicking the file, selecting Open with..., and then choosing CORIOgrapher version that is required from the list.
- Encoder Manager dialog uses tabs, and the tab default behavior changes the selected tab highlight when the mouse hovers over child items.
- Application Window title bar is not themed.
- Changing pixel clock on an active custom resolution has no effect.
- Canvas Cut-to-black will overwrite the current output cut-to-black and canvas audio mute values, which means the previous values cannot be restored.
